VISUALIZING AND PREDICTING HEART DISEASE

Who does the problem affect?

People with unhealthy lifestyles, age above 40, obesity and even the ancestors who got the disease (as the heart disease is hereditary).

When does the issue occur?

The issue occurs mostly for people with age above 40 and unhealthy lifestyles.

Where is the issue occurring?

The issue is originating from an unhealthy style. It mostly occurs in the blood valves of the heart.

What would happen if we didn't solve the problem?

If we don't solve the problem, most of the people will die at a young age. The death rate will increase very rapidly.

Why is it important to fix the problem?

We should predict the problem prior to giving treatment to the patients. As the problem is predicted early, we can solve it easily.
